REGISTRATION DEADLINE
Tuesday, DECEMBER 15, 2020

The International Monetary Fund's Statistics Department (STA) and South Asia Regional Training and Technical Assistance Center (SARTTAC) are organizing a **Regional Webinar on the treatment of restructured loans for FSI compilation on Thursday, December 17, 2020 from 9:00 a.m. - 11:30 a.m. (IST).**

TARGET AUDIENCE

This webinar is mainly designed for central bank and banking supervision officials, namely from regulation, supervision, research and statistics departments who have interest or involvement in the financial stability and compilation of FSIs for their institution/country.

There is no limit on the number of attendees. The event is open to all those interested. You are encouraged to share this invitation with colleagues in your agency and other officials whose professional engagements are closely related to the topic and will benefit from attending this webinar.

WEBINAR OBJECTIVES

Participants will review recent country experience with loan restructuring, as well as foundational accounting and regulatory practices related to loan loss classification and provisioning for restructured loans. The webinar also introduces a tool to track the evolution of restructured loans for micro-financial monitoring purposes. Upon completion of this webinar, participants should be familiar with the key mythological aspects related to loan classification and provisioning requirements and the challenge posed by restructured loans in the compilation of FSIs. Participants will also better understand the financial stability implications of these loans.

WEBINAR DESCRIPTION

In response to the COVID-19 pandemic, a number of economies have seen their banking sector engage in loan restructuring—providing borrowers breathing room to face this severe negative shock. However, when conducted on a large scale, this type of forbearance can create uncertainty on the viability of the banking sector. There, for financial stability monitoring purposes, it is important to properly account for these actions in FSI compilation.
